

Company Name: QA InfoTech

Overview : QA InfoTech (an ISO 9001:2008, 20000-1:2005, 27001:2005 and CMMI Level III certified company) is a 600-person independent quality assurance and software testing firm that was founded in 2003 and has five testing “Centers of Excellence” in the United States and India. By providing end-to-end software testing, and using its proprietary testing frameworks developed using open source technology, QA InfoTech often reduces costs and time-to-market for its clients’ products in addition to improving overall product quality.

QA InfoTech offers a range of testing services including functional testing, globalization and internationalization testing, automation frameworks using open source technologies, performance testing, security testing, usability testing, mobile testing. The company specializes, and has domain expertise, in several industries including education, publishing, retail, mobile, government, banking and finance.

Offering comprehensive and world class testing facilities that can scale at short notice using virtualization and cloud computing technologies, and that include state-of-the-art hardware, server infrastructure, mobility labs and high-bandwidth Internet-connectivity, QA InfoTech can take on software testing projects of just about any size. The company has been actively serving the U.S. market for more than eight years.
